

Checkpoint 1 MVP Build Log: Study Coach & Backend Agent

1. Executive Summary & Core MVP Scope:

- Completed end-to-end task: Live reading, parsing, and summarizing local coursework files and backend codebases using an active tool connection.
- Platform: Claude Desktop with MCP Filesystem Connector.

2. Build Log & Iteration History:

- **Issue 1 (Path Permissions):** The MCP filesystem server initially restricted access due to relative path definitions. Resolved by configuring explicit absolute Windows paths.
- **Scope Adjustment:** Cut complex automated database patching to prioritize a 100% stable, flawless file-reading and analysis loop for the MVP.

3. End-to-End Test Run Verification:

- **Prompt:** Read requirements.txt and main.py, verify tech stack, and summarize routes.
- **Execution:** Agent successfully invoked filesystem tools, parsed FastAPI/Inngest configurations, and returned an accurate technical summary without manual intervention.

4. Deliverable Status:

- Working agent verified with live tool connection.
- Build log documented with real iterative challenges.
- Raw run capture verified and ready for link submission.
